

The collaborative edge
Examples of funded and
internal/health system
research projects

Examples of funded research projects include:

- American Organization for Nursing Leadership
 - An examination of workload, responsibilities, and barriers to equitable access to leadership roles post-pandemic: A national study of nurse managers
 - Care delivery models in acute care hospitals: A mixed methods descriptive study
- Greater Plains Coalition
 - Improving CLABSI risk assessment among children with cancer and those undergoing hematopoietic stem cell transplant
- National Institutes of Health (NIH)
 - Implementation of coordinated spontaneous awakening and breathing trials using telehealth-enabled, real-time audit and feedback for clinician adherence (teach): A type ii hybrid effectiveness-implementation
- Pediatric Foundation
 - Determining the best sampling methodology for the collection of cerebral spinal fluid (CSF) specimens among pediatric patients with an external ventricular drain (EVD) at Primary Children's Hospital (PCH)
- Salt Lake County Health Department - Health Literacy
 - Teach back toolkit pilot project at Avenues Clinic, cooperative project with SLC Health
- Sigma Theta Tau International
 - The influence of race on pain management among RNS: A vignette study
- Versant Center for the Advancement of Nursing
 - An exploration of social media use by nurses for job decision-making

Examples of internal or health system research projects include:

- Association of physical strength and solid organ transplant outcome
- Community health worker - examining an employed vs grant-funded model
- Evaluation of sexual assault caregiver education and reporting
- Evaluation of the 90-day MA program
- Examining the impact of microlearning on nursing documentation efficiency and nursing satisfaction with the electronic health record
- Health equity - assuring cultural humility and available cultural resources for clinicians at PCH
- Ipat pain instrument validation (pediatrics and adult)
- Rural nursing recruitment and retention
- The impact of patient assaults on nursing personnel's well-being and work stress during COVID-19
- Validity and reliability of pediatric falls in behavioral health
